

SERIE TST1x - inclinometer

The TST series inclinometer which developed by DPF is a small volume MEMS dual-axis tilt sensor, because of built-in the latest MEMS production technology inclination unit, small size, long distance transmission can up to over 2000 Meters, strong ability of resisting external electromagnet interference, can be adapted to long-term working in the industry harsh environment.

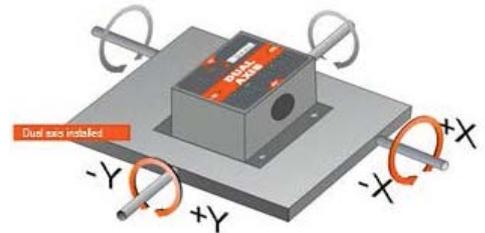

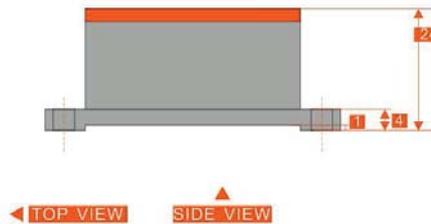

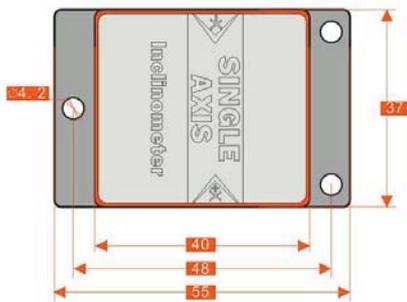

This product adopts the non-contact measuring principle, can real-time output the current attitude angle, simple to use, no need to find the relative variation of the two surface for mounting. It is a ideal choice for Industrial automation control and platform measuring attitude !

mechanical characteristics

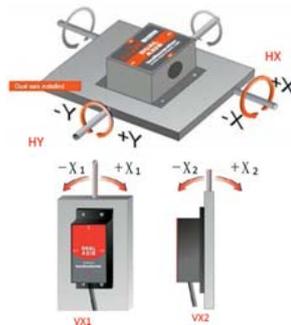

Enclosure material : Aluminum Oxide
Installation : 4*M3 screws

Angle output calculation formula

Angle=(Output current - Zero position current)÷Angle sensitivity
Angle sensitivity=output current range÷ Angle measuring range
E.g : TST-12/30/A (±30° Measuring range 16mA output current range)
Angle sensitivity= 16÷60=0.266666 mA/°
